Б82 УЧИМСЯ ПИСАТЬ ЦИФРЫ (для детей 5–6 лет): тетрадь. — Екатеринбург: ООО «Литур-опт», 2012. — 32 с.

Уважаемые родители и педагоги!

Предлагаемые задания помогут вашему ребенку быстро овладеть навыком каллиграфически верного написания цифр.

Взрослые часто не обращают внимания на развитие этого навыка, считая его несущественным. Но неверно сформированное написание устойчиво закрепляется, и в первом классе у ребенка из-за этого возникают проблемы. Намного проще изначально научить малыша писать цифры правильно.

В тетради также предлагаются задания для первоначального знакомства ребенка с составом чисел и записями математических равенств на сложение и вычитание — с помощью рисунков и чисел.

Работать в тетради надо остро заточенным простым карандашом. Ребенок должен обвести цифры и рисунки, выполненные пунктирной линией, а затем (если это предлагается в задании) повторить самостоятельно.

Тетрадь рассчитана на совместную работу взрослых и детей.

Она может быть использована в детских дошкольных учреждениях.

Желаем успеха вашему ребенку!
